## **AUTOMOBILE EXPENSES**

Additional reading and reference: Please see IRS publication 463 for information on travel, transportation, gifts & entertainment, local transportation & car expenses ([www.irs.gov](http://www.irs.gov))

When you use your car for business, you must keep detailed records of your business use. These recordkeeping requirements are prescribed by Congress and are detailed in the Internal Revenue Code and Regulations. If you have a second car that you only use for business, 100% of the costs of operating the vehicle may be used. If you have a car that you use for mixed business and personal use, the percentage of the costs attributable to business use are deducted. For example, if you drove 15000 total miles and 10000 of those miles were business-related, then 66.67% (10000/15000) of your auto expenses would be deducted subject to additional limitations described below.

These rules do not apply to short-term vehicle rentals (30 days or less). If you rent a car for short-term business use (i.e., for an out-of-town business trip), you may deduct 100% of the auto rental plus any amounts spent for fuel, parking, and tolls.

There are two methods for taking deductions for business use of your car:

- 1) Actual Expense Method
- 2) Standard Mileage Deduction

For both of these methods, you must keep track of the total miles driven during the year (**odometer reading on 12/31/2023 minus odometer reading 1/1/2023**) and the business miles driven during the year. You must keep a detailed and accurate mileage log of your business usage in order to substantiate the deduction. You may purchase a mileage log in any stationery store, make your own log, purchase an app (recommended) or I am happy to provide a template for you. Your log should include the date, business purposes/destination, beginning odometer reading, ending odometer reading, miles traveled, and parking & tolls for each business use. At the end of this article, I have included web links for mileage log resources.

For the actual expense method, in addition, you must keep track of the total amounts spent for all operating expenses (i.e. fuel, insurance, repair, service, car wash, registration, oil, lease payments. N.B. If you pay for monthly parking of your car, include the total monthly parking [garage] as part of the total operating expenses. Any specific parking and tolls related to specific business trips are stated separately as described above). You may also depreciate the business percentage of the cost of the car. Congress has prescribed limits for depreciation deductions for “luxury” autos. There is a statutory ceiling that is prescribed each year for depreciation claimed. You cannot claim more than the statutory limit multiplied by the business percentage of usage.

For example, if you use your car 75% for business (business miles/total miles) and the statutory limit on depreciation is \$18200, your maximum depreciation deduction for the year is \$13650. If you have purchased your car and are using the actual expense method, please provide the date of purchase and/or date the vehicle was put into service, the make & model of the car, and the total purchase price (including freight, sales tax, etc.) plus cost of any improvements.

With the standard mileage deduction, you keep track of your business miles and total miles driven (as described above) in your mileage log. There is a statutory cents per mile amount designated each year. Business miles are multiplied by the standard mileage amount (65.5 cents per mile for 2023/67 cents per mile for 2024 with possible mid-year changes) to arrive at your deduction. In addition, you may take business parking and tolls. The standard mileage rate is, therefore, designed to take into account depreciation and operating expenses and simplify the recordkeeping requirements. The standard mileage method is not available for vehicles that you do not own (except for leased autos as described below) or for vehicles operated as part of a fleet. **IMPORTANT: Keep your service receipts! Even if you use the standard deduction, an IRS auditor will request the service receipts to verify your odometer readings in your mileage log.**

Although the recordkeeping requirements are less onerous for the standard mileage method, the actual expense method very often produces a higher deduction (particularly in states with high insurance rates). Especially in an environment of rising fuel costs, I'd strongly urge keeping track of the actual expenses in the year you put your vehicle into service so that we can choose the method that gives you the larger deduction.

Please be certain that you have reviewed the rules for when local transportation is deductible (i.e. commuting from home to your main job is not a deduction – **unless you have a qualified home office**). I will be happy to explain these rules to you. See the chart in IRS Publication 463, page 12 <https://www.irs.gov/pub/irs-pdf/p463.pdf>

A note on leasing your car: If you lease your car and use it for business use, you may also use either standard mileage or actual expense method (this is a change—used to be only the actual expense method was allowed for leased vehicles). Your lease payments are included in your total operating expenses as described above (and the business percentage is applied to total operating expenses). If you pay an amount up front/make any advance payments on the lease, these payments are spread over the lease term and deducted ratably each year (i.e. if you made an advance payment of \$10000 on a 2-year lease, \$5000 would be included in operating expenses in year one and \$5000 would be included in operating expenses in year two). In addition, there is a provision for an “inclusion amount” to be calculated for “luxury” cars (**FMV \$60000+ for 2023/limits yet to be announced for 2024**). This provision prevents taxpayers who lease their autos from circumventing the depreciation limits described above. If you choose the standard mileage method for your leased vehicle, that method must be continued for the life of the lease.

A note on financing your car: If you pay interest on a loan used to finance your car purchase, you may deduct the interest paid (subject to your business use percentage), but only if you are self-employed. This interest deduction is not available for employees using their car for business.

If you live in a state that imposes personal property taxes on your car, the business portion of these taxes may be deducted, but only if you are self-employed. Personal property taxes are otherwise deductible as a personal itemized deduction on Schedule A. Some states (CT, for one) also allow a credit for personal property taxes on autos.

When you give your deduction information to your tax professional, do not calculate any of these amounts on your own. Please provide the “raw” information as described above.

If you have more than one business and/or use your car in your self-employed business and in your business as an employee, separate mileage information must be tracked for each business.

If you use more than one car for business, separate mileage information and records must be kept for each vehicle – including if/when you trade in or acquire a new vehicle during the tax year.

If you are married and/or co-own a car with another person and you both use the same car for business, you must keep separate mileage logs/records for each of you.

Please do not hesitate to contact me should you have any questions concerning expenses for the business use of your car.
